

Toilet Tips from our Service Department

Each year our Service Technicians spend a significant amount of time making repairs so toilets work properly on your boats. The usual issues are, the pump continues to run or the bowl is overflowing. In most of these cases, the problem is the same. The hoses and fittings connected to the toilet and to the holding tank are full of regular home use toilet paper. We can not stress strongly enough just how important it is to use Marine Toilet paper.

The following page, although gross, illustrates what happens to the toilet plumbing system when regular home toilet paper, facial tissues or paper towels are flushed down a boat's toilet.

So, save yourselves some money and save our Technicians a pretty disgusting job.

Thank You
